

National and Global Problem

The U.S. Department of Energy's National Laboratories solve major national and global problems. Battelle is proud to serve DOE as a manager or co-manager at Brookhaven National Laboratory, Oak Ridge National Laboratory, Pacific Northwest National Laboratory, and the National Renewable Energy Laboratory.

Through the Solid-State Energy Conversion Alliance—a public-private partnership jointly managed with the National Energy Technology Laboratory—Pacific Northwest National Laboratory is leading laboratory and industry teams in developing technologies for wide-scale deployment of solid oxide fuel cells. SECA's aim is to create an affordable modular fuel cell system for vehicles, stationary power and military applications. Pictured here are just a few of the more than 60 staff from PNNL who are working on this exciting new program.
