

## Healthcare Products

Converting world-class science capabilities and technologies into marketable products; moving concepts swiftly from paper to market-place; and creating new products, new technologies, and new businesses, Battelle Healthcare Products is developing breakthrough technology to meet tomorrow's healthcare challenges. Our strong reputation in medical product development translates well to meet expanding needs in a complex market including technology creation

and alliances in commercialization. Market leaders worldwide value our innovations in sophisticated diagnostic systems, novel drug delivery products, and advanced therapeutics.

*Electric field effect technology holds strong promise for therapeutic delivery. Novel products such as this wound protection device are being developed by Battelle Healthcare Products following the acquisition of Electrosols, Ltd., in Oxford, UK.*

**"Battelle Healthcare has created a great environment** for pattern recognition when it comes to next-generation healthcare products. Leveraging our technical expertise and market knowledge with a network of clinical and academic research leaders, we accelerate technology development and commercialization."

—**Herb Bresler**, Technology Director, Battelle Healthcare Products, is evaluating a method for the detection and enumeration of epithelial cells in blood samples. Expected to be faster and cheaper than current techniques, this method has the potential to become a routine blood test and—if it proves to be a relevant indicator for cancer—can be easily adopted into established medical practice. Commercialization for this technology is still under consideration.
