POWERING THE NEW ENGINEER TO TRANSFORM THE FUTURE

Department of Environmental Engineering Sciences

Long-term DNAPL Source Zone Response to Bioaugmentation using Mass-flux Measurements and Push-pull Tracer Tests

Alexander Haluska

Michael Annable, Ph.D. (University of Florida)

Jay Cho, Ph.D. (University of Florida)

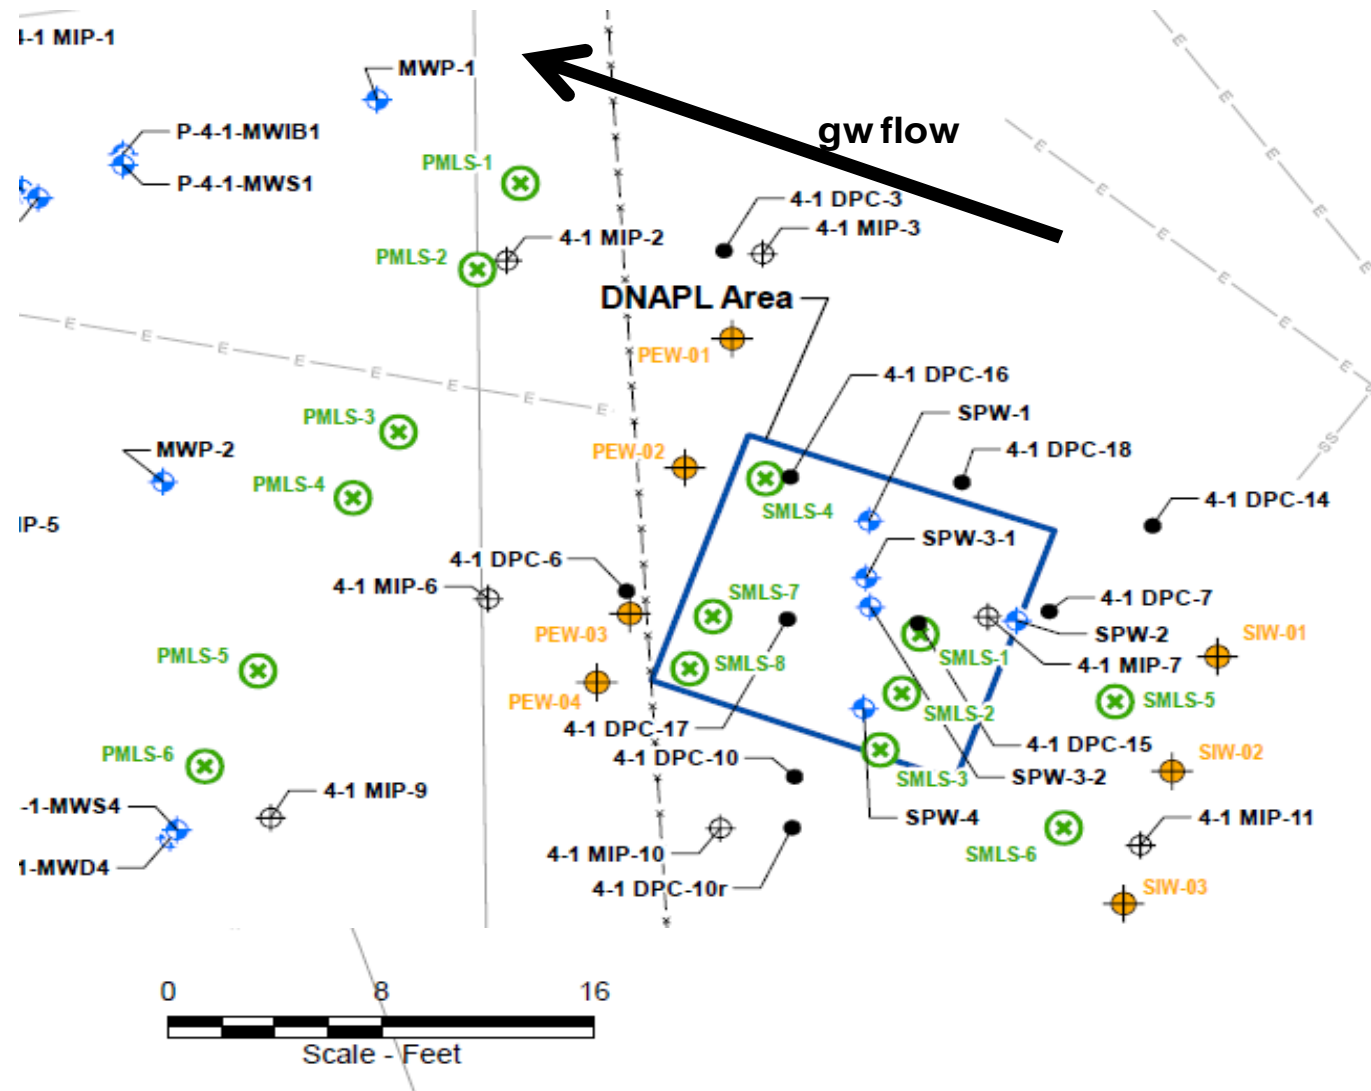

Charles Schaefer, Ph.D. (CB&I)

May 17, 2017

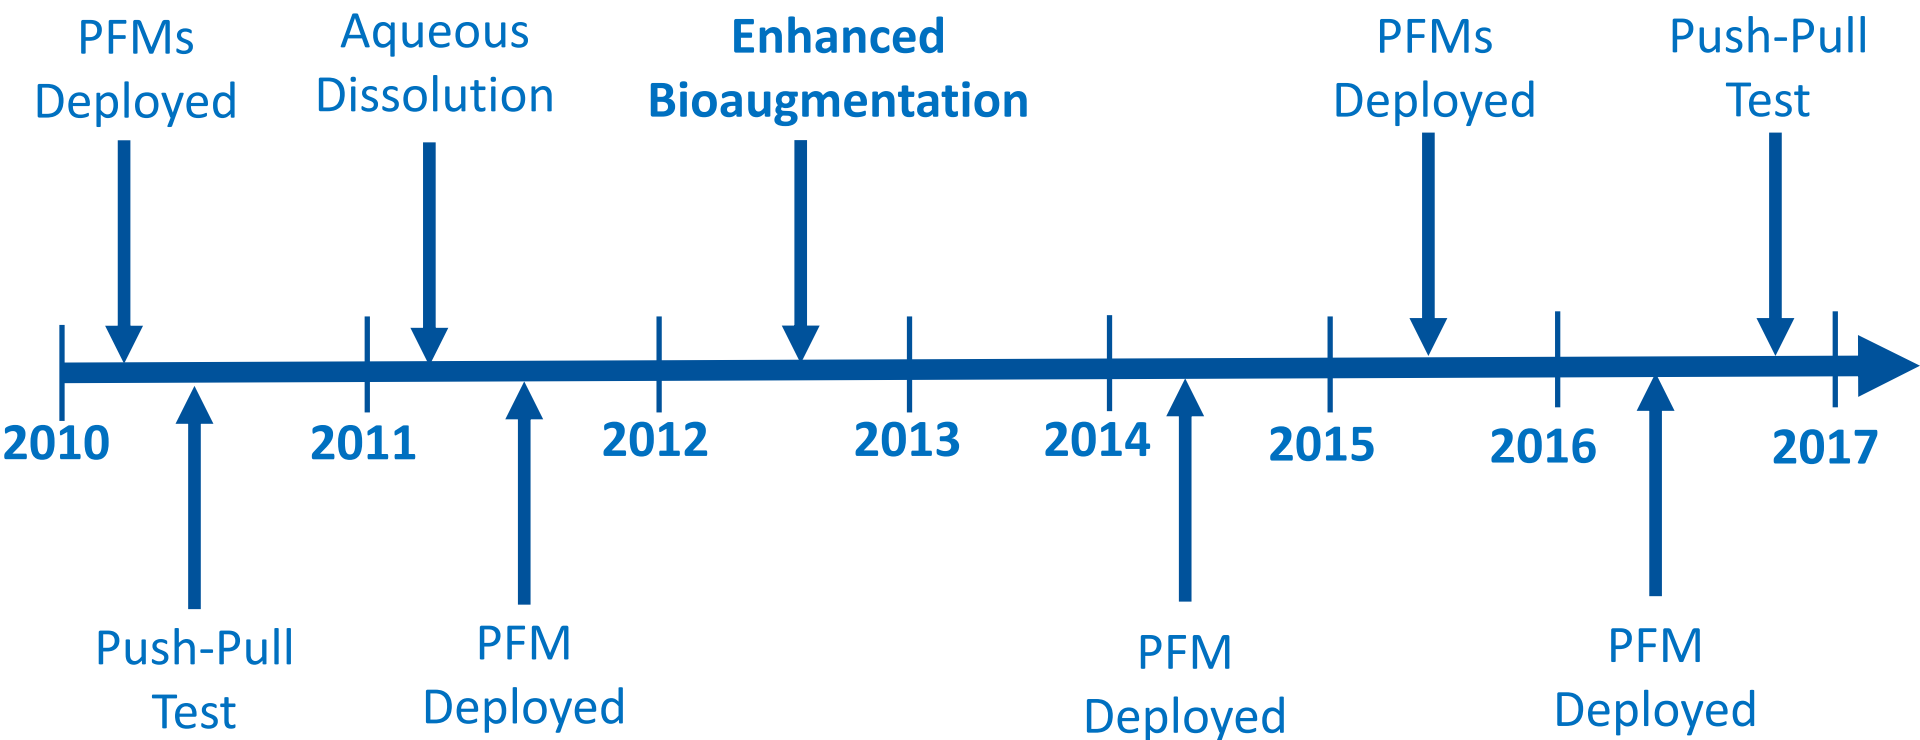

Technical Objectives

- Assess DNAPL mass quantity and composition post bioaugmentation
- Assess long-term contaminant mass flux post bioaugmentation

Alameda Point, CA

Fieldwork at Alameda, CA

Push-pull tracer analysis

- Repeated Direct Push-Pull tracer test to assess DNAPL removal
 - Nonpartitioning tracers:
 - Bromide
 - Methanol
 - Partitioning tracers:
 - e-Hexanol
 - 2-octanol
 - 3.7 L DNAPL measured 2010

Push-pull tracer analysis

Method of Moments

$$\frac{C}{C_o} = \frac{1}{2} \operatorname{erfc} \left\{ \frac{\left(\frac{V_{ext}}{V_{inj}} - 1 \right)}{\left[\frac{16}{3} \frac{\alpha_L}{\hat{r}_{max}} \left(2 - \left| 1 - \frac{V_{ext}}{V_{inj}} \right|^{\frac{1}{2}} \times \left(1 - \frac{V_{ext}}{V_{inj}} \right) \right) \right]^{1/2}} \right\}$$

$$S_N = \frac{R - 1}{K_{N,2} - 1 - R(K_{N,1} - 1)}$$

Requires good separation between tracers

Equilibrium Streamtube Model

$$\bar{C}_{non-partitioning} = 1 - \frac{C_{Non-partitioning}}{C_{0-Non-partitioning}}$$

$$\bar{C}_{TCE/DCE} = \frac{C_{TCE/DCE}}{C_{max,TCE/DCE}}$$

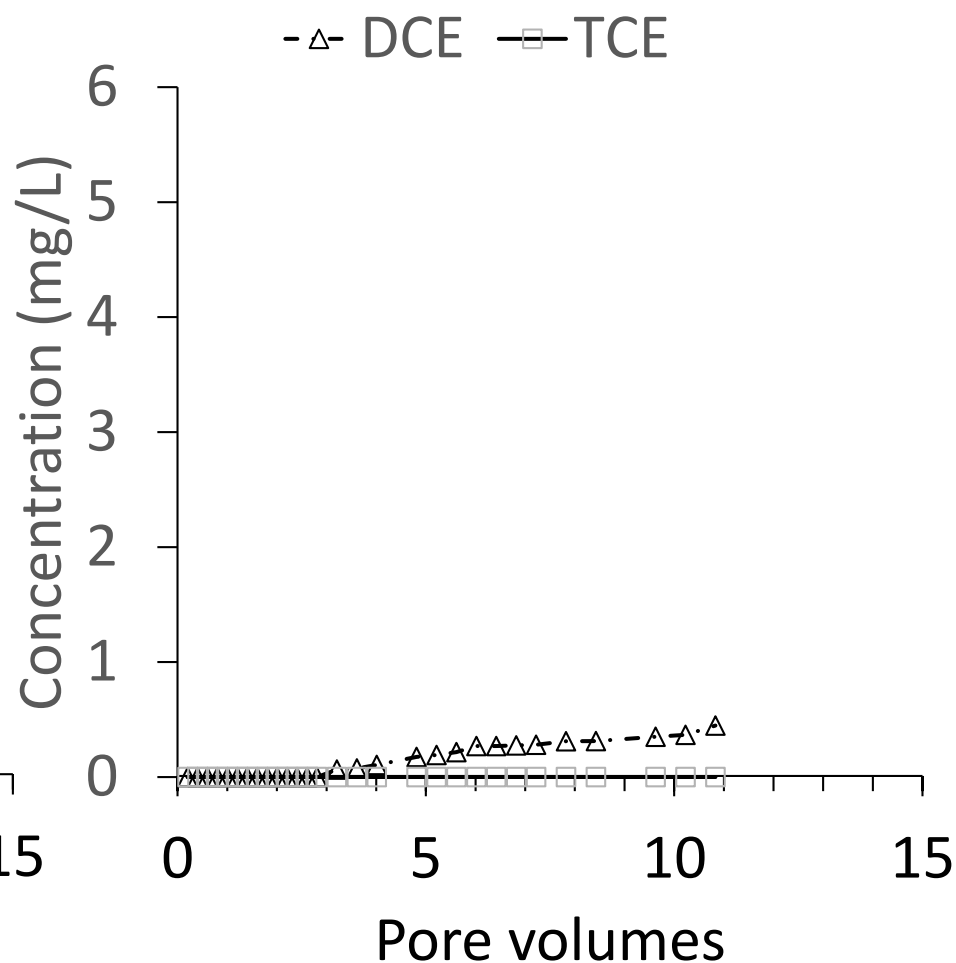

$$\frac{C(t)}{f_c C_s} = \frac{1}{2} \left[1 - \operatorname{erf} \left(\frac{\ln t - \mu_{\ln \tau}}{\sigma_{\ln \tau} \sqrt{2}} \right) \right]$$

Requires immediate recovery of TCE/DCE

Push-Pull Test: SPW-4

Pre-bioaugmentation

Post-bioaugmentation

SPW-4 (No DNAPL Present)

□ Br — EST model fit △ Total TCE -.- EST model fit

Push-Pull Test: SPW-3-1

Pre-bioaugmentation

Post-bioaugmentation

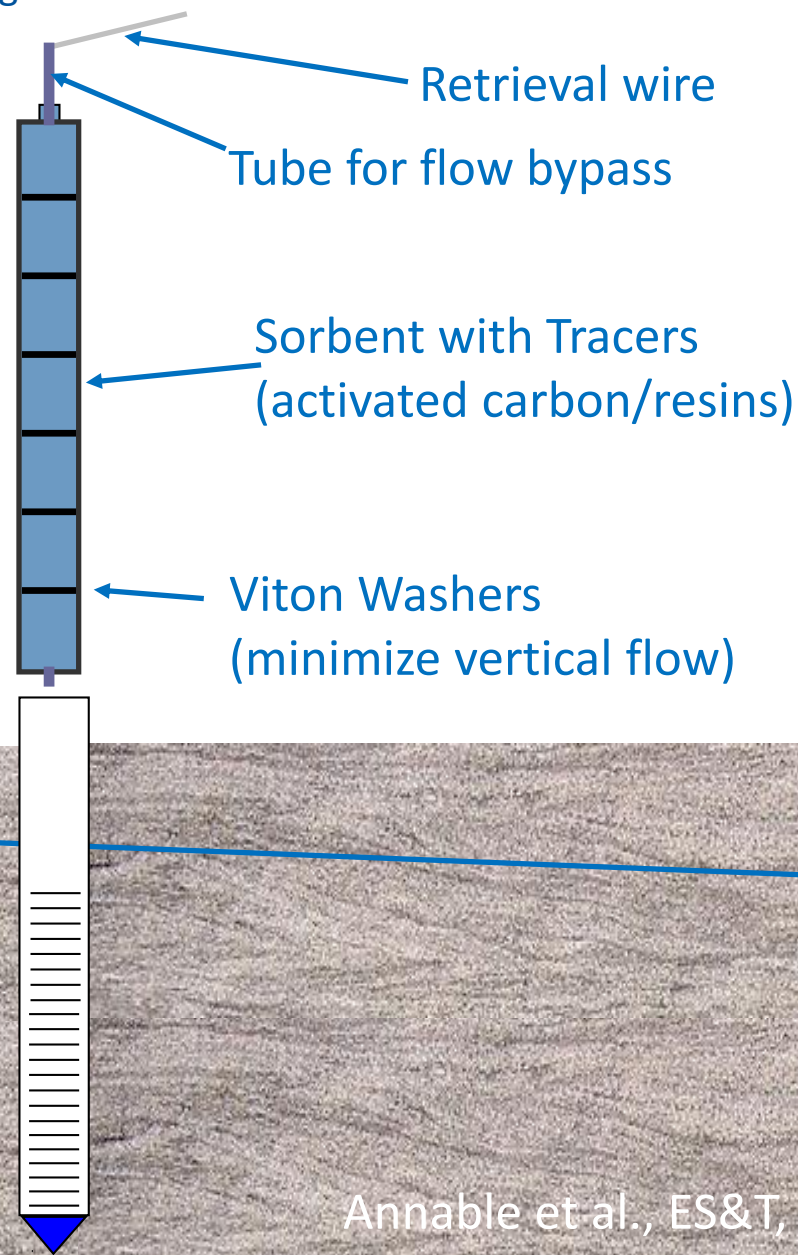

Well SPW-3-1

□ Br — EST model fit △ Total TCE -.- EST model fit

Passive Flux Meter Technology

Passive Flux Meter (PFM) Concepts

$$J_c = q_w \cdot C_c$$

Contaminant Flux Water flux

From PFM's

Displaced resident tracers for groundwater flux

Captured contaminants for contaminant fluxes

Transect Method

$$M_D = \int_A J dA$$

Units
[M/T]

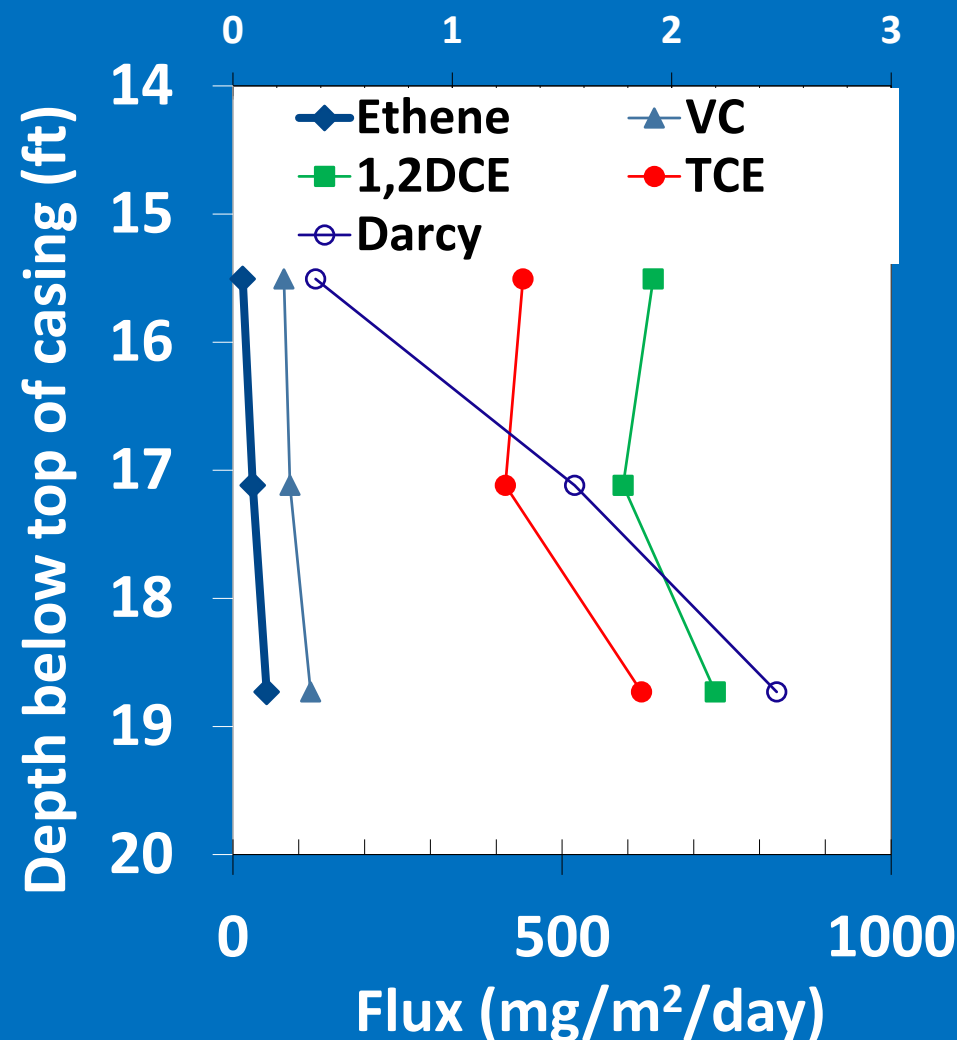

Mass Flux of Chlorinated Solvents

SPW-3-1 (05/19/15)

SPW 3-1 (09/16/17)

MWP-2 (05/19/15)

Darcy velocity (cm/day)

MWP-2 (09/06/17)

Darcy velocity (cm/day)

Conclusions

- 22% decrease in DNAPL mass based on Push-pull test
- DNAPL mass shifted from TCE to cis-DCE dominated NAPL
- 90% mass flux reduction since enhanced bioaugmentation

Future Work

- Develop monitoring technologies to measure biomass flux
- Develop numerical and analytical models to model biodegradation decay rates based on contaminant mass flux rates
