NEON Program Instrumentation and Engineering: *Designing for Resiliency*

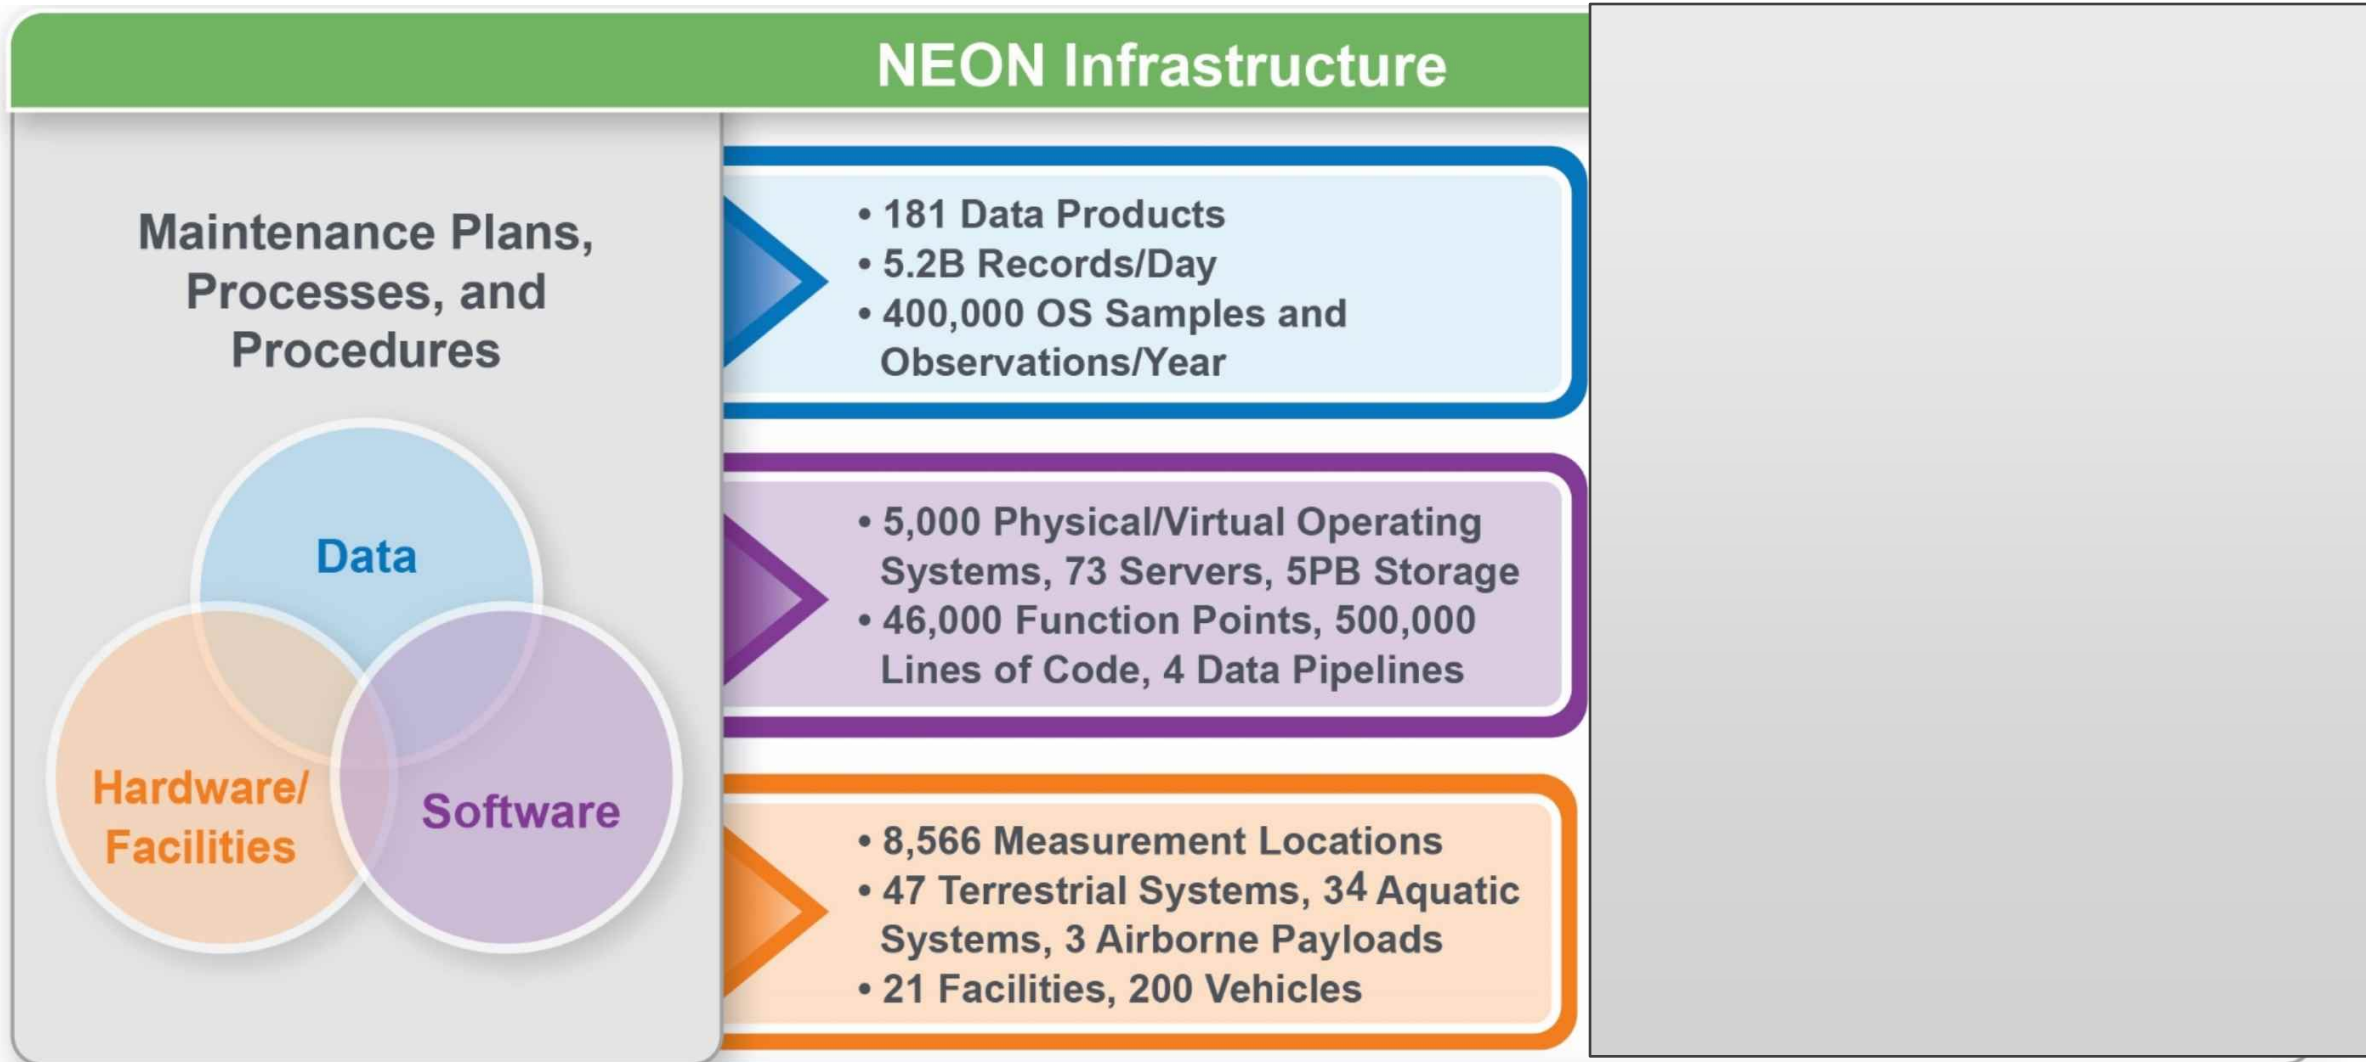

Innovations in Climate Resilience Conference

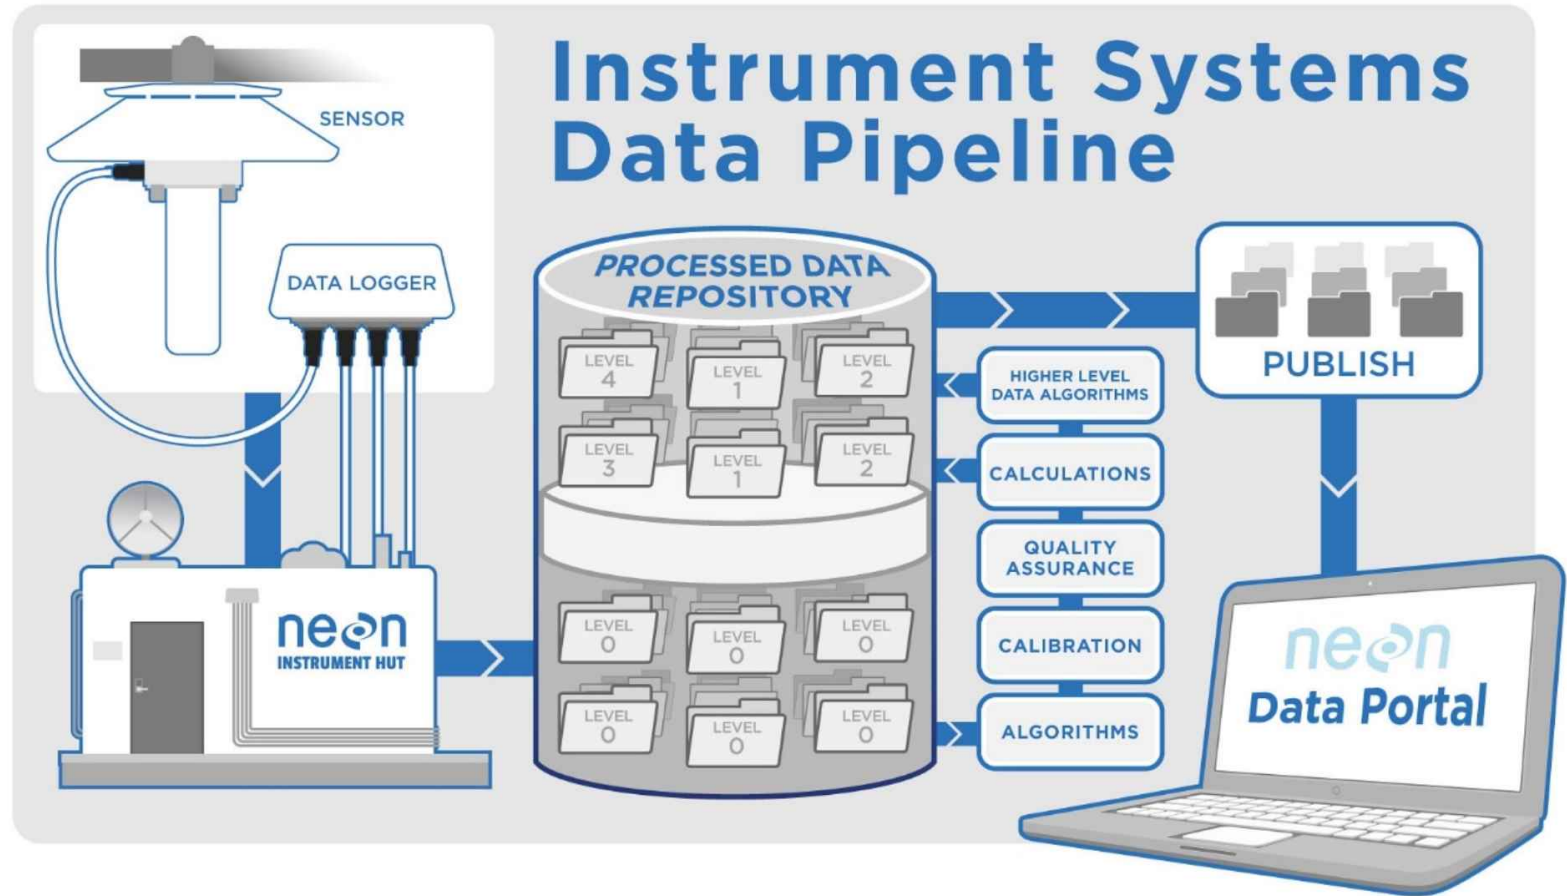

The NEON Program

The NEON Program

The NEON Program

Extreme Events

Snowfall/pack Levels

- Primary Precipitation Sensor with DFIR at Woodworth (WOOD) in Domain 09 (ND)
- Snowpack on a Terrestrial Instrument Hut at Lower Teakettle (TEAK) in Domain 17 (CA)

Severe Storms & Hurricanes

- Hurricane Ian making landfall as CAT4 in Domain 03 (FL) and 04 (PR)
- Hurricane Fiona as CAT1 hitting Lajas Experimental Station (LAJA) in D04 (PR)
- Storm cell in the distance at a Tower site at Jornada Experimental Range (JORN) in Domain 14 (NM)

Hydrological Events

- Flooding at Stream Aquatic Instrument Sites at Upper Big Creek (BIGC) in Domain 17 (CA) and LeConte Creek (LECO) in Domain 07 (TN)

Volcanic Events

- Volcanic activity in Domain 20 (HI): Mauna Loa and Kilauea Volcanoes

Extreme Events

Wildfires & Controlled Burns

- Wildfire smoke at Rocky Mountain National Park (RMNP) in Domain 13 (CO)
- Controlled burn at Ordway-Swisher Biological Station (OSBS) in Domain 03 (FL)

Extreme Heat

- Extreme heat at southern and neo-tropical sites in Domain 08 (AL), Domain 03 (FL-GA), Domain 04 (PR), Domain 11 (TX), and Domain 14 (AZ-NM)

Extreme Cold & Subsidence

- Extreme cold at Northern Sites in Domain 09 (ND), Domain 12 (MT), Domain 13 (CO), Domain 05 (MI), & Domain 18/19 (AK)
- Subsidence at Tundra sites in Domain 18/19 (AK)

Earthquakes

- San Andreas Fault and other fault lines in Domain 17 (CA) and across other Domains CONUS and OCONUS

Innovative Designs: *Stream Overhead Design*

Design Innovations: *TOMB River Buoy*

Design Innovations: *Aquatic Alternate/Remote Power Site Designs*

Red Butte Creek (REDB) in Utah: Stirling Engine Propane System 

Sycamore Creek (SYCA) in AZ: Solar Power

Oksrukuyik Creek (OKSR) in AK: Solar Power

Asset Lifecycle Management

Predictive Maintenance & Planning Objectives

Observatory wide coordination to address asset condition and plan to maintain and support the observatory to meet its mission.

- Maintain data quality
- Continuous improvement framework
- Systematized maintenance approach for repair, upgrade planning and forecasting
- Method to address upgrades and obsolescence
- Establish and consistently apply a risk-based framework Develop an Annual Road Map
- Cross-functional team approach: Asset Lifecycle Management (ALM) Integrated Product Team (IPT)

Significant Upgrades & Optimizations

Grape 2.0 Data Logger

Old Grape Internal View

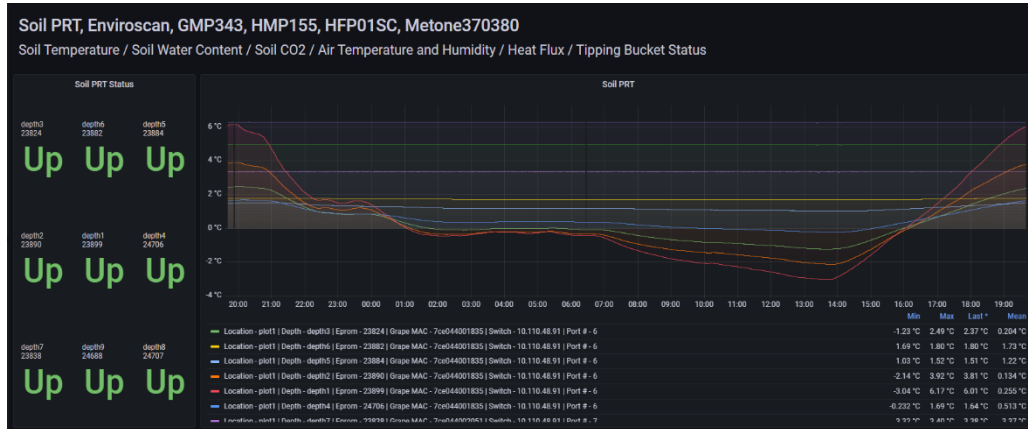

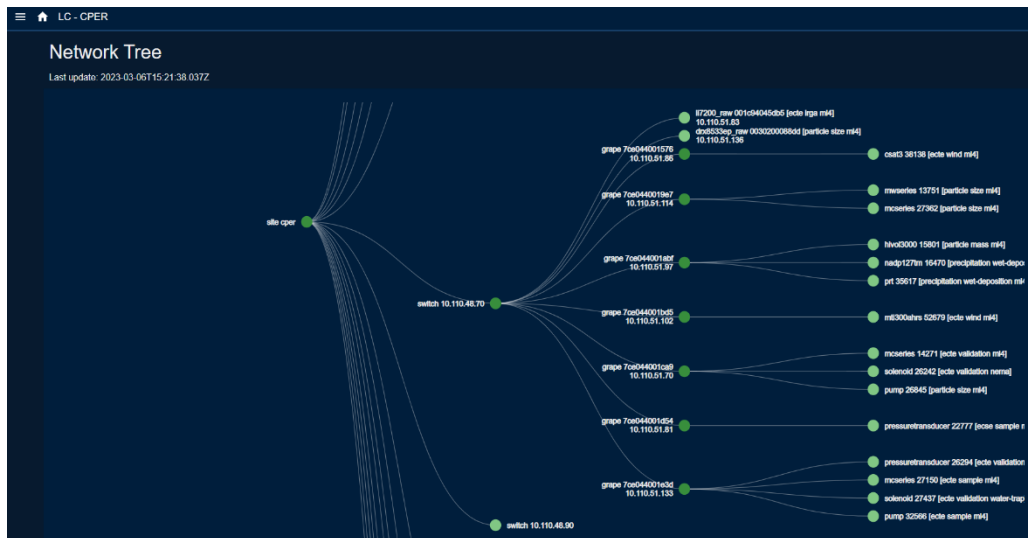

NEW Grape Internal View

Grape Installation on a Tower Boom Arm

Significant Upgrades & Optimizations

The New Location Controller (LC)

Eddy Covariance Storage Exchange - ECSE

Last update: 2023-03-02T15:59:23.280Z

ECSE enabled **Manual override** **APPLY**

VALIDATION GASES

- ZERO

NEON Program Assignable Asset Program

A Research Platform for Industry Use

Use NEON infrastructure for research activities!
NEON infrastructure includes 4 areas:

1. Adding sensors to existing field site infrastructure
2. Using NEON scientists to collect field observations at a field site
3. Requesting a Mobile Deployment Platforms (MDP): These mobile sensor arrays may be deployed for short- to medium-term data collection projects and may be outfitted with meteorological, soil, and surface water sensors
4. Requesting an airborne remote sensing survey

Why does this matter?

Industry

- ✓ 24/7/365 direct emissions mapping, e.g., for carbon sequestration and soil health monitoring

Policy

Carbon Dew – Direct Greenhouse Gas Exchange Measurements for an Equitable Worldwide Emissions Trading

THE FEDERAL STRATEGY
TO ADVANCE AN
INTEGRATED U.S. GREENHOUSE GAS
MONITORING & INFORMATION SYSTEM

Prepared by the
Greenhouse Gas Monitoring & Measurement Interagency Working Group
